

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	MONTCLAIR HOSPITAL MEDICAL CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106361166
Report Period:	01/01/2024 - 12/31/2024
Status:	Submitted
Due Date:	11/29/2025
Last Updated:	11/24/2025
Hospital Location with Clean Water and Air:	N
Hospital Web Address for Equity Report:	https://montclair-hospital.org/

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

28228

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	21721	28228	76.9
Spanish Language	6326	28228	22.4
Asian Pacific Islander Languages	136	28228	0.5
Middle Eastern Languages	14	28228	0.0
American Sign Language	suppressed	28228	suppressed
Other Languages	suppressed	28228	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

329

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

2682

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

12.3

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	43	13.1	0	
Housing Instability	78	23.7	0	
Transportation Problems	39	11.9	0	
Utility Difficulties	18	5.5	0	
Interpersonal Safety	6	1.8	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

365

Total number of respondents to HCAHPS Question 19

424

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

86.1

Total number of people surveyed on HCAHPS Question 19

1211

Response rate, or the percentage of people who responded to HCAHPS Question 19

35.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language

Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

326

Total number of respondents to HCAHPS Question 17

424

Percentage of respondents who responded "yes" to HCAHPS Question 17

76.9

Total number of people surveyed on HCAHPS Question 17

1211

Response rate, or the percentage of people who responded to HCAHPS Question 17

35.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

14

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

243

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

57.6

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarean birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

317

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

1794

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

17.7

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	9.5	2.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	13.7	2.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	9.5	2.0
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			18 to 34	9.5	1.6

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	13.6	1.3
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Sex Assigned at Birth			Female	15.6	1.2
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth			Female	16.5	1.2

Plan to address disparities identified in the data:

Montclair Hospital Medical Center is committed to reducing disparities in 30-day hospital readmission rates through targeted, evidence-based interventions. Our focus includes older adults (65+) and middle-aged adults (50-64), who experience the highest readmission rates, as well as racial and ethnic groups disproportionately affected, including Black/African American and White patients.

Key strategies include structured post-discharge follow-up programs, medication reconciliation, and coordination with primary care providers. We have language interpretation services for Spanish-speaking patients and are strengthening cultural responsiveness across care teams. For male patients, particularly those without behavioral health diagnoses, we will enhance discharge planning and continuity of care.

Goal: Reduce readmission rates by at least 5% of the baseline period performance for each identified disparity group within 12 months.

Timeline:

- Q1-Q2: Planning and staff training.
- Q3: Pilot implementation.
- Q4: Evaluation and scaling.

Performance in the priority area:

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific

timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care:

At Montclair Hospital Medical Center, we prioritize care that is respectful of and responsive to individual patient preferences, needs, and values. Patient voices are incorporated through patients themselves, including their caregivers/patient advocates and post-discharge patient experience surveys, ensuring that care plans reflect community input. Our hospital's leadership is actively engaged in community outreach programs in collaboration with city council and conducts town hall meetings to better understand our community members' preferences, needs and values.

We collect and analyze patient experience data by race, ethnicity, and language to identify gaps and improve equity. Qualified interpreters are available for all non-English encounters, and culturally tailored materials including translated discharge instructions are consistently provided. Our measurable goal is to achieve 100% screening for language preference and maintain interpreter use for at least 98% of non-English interactions.

Alignment with Equity Goals:

These initiatives directly support our hospital's equity plan by addressing disparities in readmission rates among older adults, racial and ethnic groups, and patients with language barriers. By improving communication, cultural responsiveness, and patient engagement, we aim to reduce avoidable readmissions and promote equitable health outcomes for all populations we serve.

Patient safety:

Montclair Hospital Medical Center is dedicated to minimizing risks and harm during care delivery for all patients. We review safety metrics such as falls, medication errors, sepsis core measure compliance and hospital acquired infection rates quarterly, stratified by race, ethnicity, age, and language preference to identify and address disparities.

Recent analysis revealed higher readmission and potential safety risks among older adults and Black/African American patients. In response, we have implemented equity-focused protocols, including enhanced discharge planning for high-risk populations and staff training on cultural competency and bias reduction. We are currently in process of leveraging a predictive analysis tool for early identification of high-risk patients with avoidable readmissions so that tailored interventions can be put in place. Additionally, we are strengthening our partnerships with post-acute facilities (ex. SNFs, and Home Health Agencies) to maintain high quality continuity of care.

Qualified interpreters and culturally tailored safety materials are consistently available to ensure clear communication. Patients and families are actively engaged through bedside safety checklists and education sessions in their preferred language.

Alignment with Equity Goals:

These initiatives directly support our hospital's equity plan by addressing demographic variations in safety outcomes and reducing harm for vulnerable populations. By integrating patient voices and culturally responsive practices into safety protocols, we aim to improve trust, reduce preventable events, and promote equitable care for all.

Addressing patient social drivers of health:

Montclair Hospital Medical Center recognizes that factors such as housing, food security, income, and transportation significantly impact health outcomes. We screen all admitted patients for SDOH using the PRAPARE tool, ensuring that social needs are identified early in the care process. Of the

74% of patients screened in CY2025, housing instability and food insecurity have been the primary challenges.

Analysis of our patient population shows that unmet needs are most prevalent among Medicaid and Medicare patients, who also experience higher readmission rates. To address these gaps, we have established referral pathways to community resources, including local food banks, housing assistance programs, and transportation services.

Under the guidance of our Health Equity Officer, we assist patients in connecting with these resources and follow up post-discharge to ensure continuity of support.

Alignment with Equity Goals:

These initiatives complement our hospital's equity plan by addressing non-clinical factors that contribute to disparities in readmission rates. By integrating SDOH screening and resource linkage into care delivery, we aim to reduce avoidable hospitalizations and improve overall health equity for vulnerable populations.

Performance in the priority area continued:

Performance across all of the following priority areas.

Effective treatment:

Montclair Hospital Medical Center is dedicated to providing evidence-based, timely, and appropriate clinical care for all patients. We monitor performance metrics such as medication adherence and discharge prescriptions by age, race, ethnicity, and insurance type to identify gaps in guideline-concordant treatment.

Our data shows that older adults (50-64 and 65+) and patients with Medicare or Medicaid coverage experience higher readmission rates, signaling potential gaps in care transitions and chronic disease management. To address this, we have integrated equity-focused clinical decision support into our EHR, including alerts for high-risk populations and prompts for culturally tailored education materials.

Provider education sessions emphasize bias reduction and adherence to evidence-based guidelines across all demographic groups. Patients and families are engaged through shared decision-making and personalized discharge plans that reflect individual preferences and language needs.

Alignment with Equity Goals:

These initiatives directly support our hospital's equity plan by reducing disparities in treatment quality and improving outcomes for vulnerable populations. By embedding equity into clinical workflows and decision support, we aim to close gaps in care and achieve measurable improvements in readmission rates and patient satisfaction.

Care coordination:

Montclair Hospital Medical Center is committed to ensuring care is organized across providers, settings, and time to support smooth transitions for all patients. Our data shows that older adults and patients with Medicare or Medicaid coverage experience higher readmission rates, indicating a need for stronger post-discharge coordination.

To address these gaps, we have implemented a structured transitional care program that includes early discharge planning, medication reconciliation, and scheduled follow-up appointments. We use substance navigators and discharge planners/social workers to assist high-risk populations, particularly those facing language barriers or social needs, with appointment scheduling, transportation, and resource linkage.

We monitor follow-up visit completion rates by age, race, ethnicity, and insurance type to identify disparities. When gaps are detected, targeted interventions such as community outreach and culturally tailored education are deployed.

Alignment with Equity Goals:

These initiatives directly support our hospital’s equity plan by reducing disparities in care continuity and preventing avoidable readmissions. By integrating patient voices, addressing social determinants, and ensuring culturally responsive coordination, we aim to improve health outcomes and patient trust across all populations.

Access to care:

Montclair Hospital Medical Center is committed to ensuring that all patients can obtain timely, culturally appropriate services. Our review of disparities shows that patients with Medicare and Medicaid coverage and older adults experience higher readmission rates, often linked to barriers such as transportation, appointment availability, and insurance limitations.

To improve access, we are working to expand our telehealth services for follow-up visits and helping our patients set up PCP visits in our primary care clinic and have partnered with local transportation programs to assist patients without reliable transit. Language access remains a priority qualified interpreters are available for all non-English encounters, and discharge instructions are provided in multiple languages to support Spanish-speaking patients and others with limited English proficiency.

We monitor appointment wait times and follow-up completion rates by race, ethnicity, and insurance type to identify and address inequities. When gaps are detected, targeted outreach and scheduling support are provided through patient navigators.

Alignment with Equity Goals:

These initiatives directly support our hospital’s equity plan by reducing barriers to care and improving continuity for vulnerable populations. By addressing transportation, language, and scheduling challenges, we aim to ensure equitable access to high-quality care for every patient we serve.

Methodology Guidelines:

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
